

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Canceled)
2. (Previously presented) A fusible link unit comprising:
  - at least one fuse circuit structure containing a plurality of terminal portions linked through fusible members to a linking plate;
  - a housing into which said fuse circuit structure is assembled; and
  - at least one terminal support for supporting a corresponding one of said terminal portions in a state that a front surface of the corresponding terminal portion is exposed from said housing,
  - wherein said terminal support includes at least one pawl part for preventing a displacement of said corresponding terminal portion in a direction substantially normal to a surface of a corresponding terminal portion, and
  - wherein said corresponding terminal portion includes a pair of tilting parts which is formed along both sides of said corresponding terminal portion so as to be tilted toward a back surface of said terminal portion, and a pair of pawl parts are provided in said terminal support such that said pawl parts cover said pair of tilting parts, respectively.

3. (Canceled)
4. (Canceled)
5. (Canceled)
6. (Original) A fusible link unit according to claim 2, wherein said terminal support includes a pair of pawl parts and a pair of grooves formed along said pawl parts, and  
side edges of said corresponding terminal portion are entered into said pair of grooves.
7. (Original) A fusible link unit according to claim 6, wherein said corresponding terminal portion is connected to a mating terminal portion by a nut member and a screw.
8. (Original) A fusible link unit according to claim 7, wherein a nut receiving recess is formed in said terminal support.
